

Google Ads API — Basic Access Application

Supporting Documentation | Corporate Cars Melbourne

1. Applicant Details

Company	Corporate Cars Melbourne — executive chauffeur, airport transfer and corporate fleet services
Location	Melbourne, Victoria, Australia
Website	https://corporatecarsmelbourne.com.au
Manager account (MCC)	940-367-5519
Ads account managed	194-940-8641 (our own account, under the MCC above)
Cloud project number	888714866341
Developer contact	sonundmitteamb@gmail.com

2. What the Tool Is

We operate a single internal marketing dashboard for our own business. It is a private web application, hosted on our own server and reachable only by our in-house marketing team behind an authenticated login. It is not a product, it is not sold or licensed, and it is not made available to any third party, client or agency.

Its purpose is to bring the reporting we already read manually — Google Ads performance, Google Search Console rankings, Google Analytics traffic and our own social and blog publishing — onto one screen, so our small team stops logging into five interfaces to answer the same weekly questions.

The Google Ads API is used for reading our own account only. The application performs no campaign creation, no bid changes, no budget changes and no mutations of any kind.

3. How We Use the Google Ads API

Service	Purpose	Operations
GoogleAdsService (search / searchStream)	Read campaign performance for our own account 194-940-8641: impressions, clicks, cost, conversions, CTR, average CPC and CPA. Displayed as a dashboard summary and a monthly internal report.	Read only
KeywordPlanIdeaService	Retrieve search volume and competition for keywords relevant to chauffeur and airport transfer services in Melbourne, so our blog and landing-page topics are chosen from real demand data rather than guesswork.	Read only
CustomerService	Confirm account access and resolve the account name on first connection.	Read only

No mutate operations are implemented. The application ships with a safety flag, `ADS_LIVE_EXECUTION_ENABLED=false`, which is enforced in the integration layer: any write path returns a simulation object instead of calling the API. The dashboard surfaces this state to the operator as "PROTECTED (Zero Spend)". Budget and bid decisions are made by a person inside the Google Ads interface.

4. Data Flow

1. Request	A scheduled job (or an operator opening a report) calls the Google Ads API using our own OAuth2 refresh token and developer token, scoped to account 194-940-8641.
2. Response	Aggregated campaign metrics and keyword volume figures are returned. No personally identifiable information and no end-user data is requested or received.
3. Storage	Results are written to a local SQLite database and JSON files on our own server, purely as a cache so the dashboard does not re-query on every page load.
4. Display	The figures are rendered in our internal dashboard and in a monthly summary report read by our marketing team.
5. Retention	Cached figures are retained for 12 months for year-on-year comparison, then overwritten. Data is never exported, shared, sold or transmitted to any third party.

5. Access and Users

Who has access	Internal employees only — our in-house marketing team (fewer than five people).
External access	None. No clients, contractors, agencies or external parties can reach the tool.
Accounts touched	One: our own account 194-940-8641. We do not manage accounts for anyone else.
Third-party tools	None. The token is not shared with, or used by, any tool built by another party.
Authentication	Login-gated dashboard on our own domain; credentials held in server-side environment files.

6. Security and Compliance

- The developer token, OAuth client credentials and refresh token are stored in environment files on our own server, outside the source repository, and are never exposed to the browser.
- All API traffic uses the official Google Ads Python client library over TLS.
- The application requests the minimum data needed for reporting and keyword planning, and collects no end-user or customer information through the API.
- We do not resell, redistribute or publish any data obtained through the Google Ads API.
- We accept and will continue to comply with the Google Ads API Terms and Conditions and the Required Minimum Functionality guidelines.

7. Declaration

This application is submitted for **Basic Access** to the **Google Ads API**. The tool described here is an internal, read-only reporting and keyword-planning assistant for our own single Google Ads account. It is not a commercial product, it serves no external users, and it performs no write operations against any Google Ads account.

Prepared for the Google Ads API Compliance team. A previous submission (Case ID 29954541286) was returned because the manager account field was completed with the client account number 194-940-8641 instead of our manager account. This resubmission corrects that field to **940-367-5519**.
